

GN Engagement update – Informal OSC

- Gynaecology
- MSK
- Podiatry

Gynaecology

Survey was re-opened /extended to allow more engagement and feedback to take place with patients and members of the public.

Previous numbers: 65 surveys completed (7 were incomplete so couldn't be analysed)

Now: 95 surveys completed (1 x focus group)

Updated report being produced/summarised.

MSK (Musculoskeletal)

Engagement will be taking place to seek the views of a 'single point of access' for patients to access MSK services. This will mean everyone will access the MSK services the same way and will be seen by the right specialist and should reduce patients being transferred between services / reduce duplication.

- Survey Monday 22nd October – 18th November
- Liaising with providers to attend MSK clinics to promote surveys

Podiatry

EQIA to inform Engagement plan – in the process of being produced.

Looking to implement Greater Nottingham Model with principals from the Sheffield model with local content.

Engagement is thought to take place Jan/Feb 2019.
