Research Delivery & Performance Report
Nottinghamshire Clinical Commissioning Groups
Quarter 3 2017/18**

Report Date: 5 February 2018 (Data cut 29 January 2018)
Report data range: 1 April 2017 to 29 January 2018
Recruitment: 1,134
Unique Studies 26

Report Contents

Section 1 Report Introduction and Purpose
Section 2 NIHR CRN National Overview
Section 3 CRN: East Midlands Overview
Section 4 Provider Trusts
Section 5 Primary Care Organisations

Section 1: Report Introduction and Purpose

Welcome to the NIHR Clinical Research Network: East Midlands (CRN East Midlands) research delivery and performance report created for Clinical Commissioning Groups (CCGs). This information is intended to support CCGs with their duty to promote research on matters relevant to the health service as outlined in the Health and Social Care Act (2012).

We acknowledge that this information may provide only an element of the local research picture within a geographical area as this report focuses on research studies that are included on the NIHR CRN Portfolio and does not cover research activity that occurs within other research infrastructure such as the East Midlands Academic Health Science Network, Biomedical Research Centres, Clinical Research Facilities or NIHR CLAHRC East Midlands.

Section 2: NIHR CRN National Overview

High Level Objectives (HLO)

The Clinical Research Network measures its effectiveness against a set of high level objectives set by the Department of Health. In broad terms, these objectives include:

1. Increasing the number of participants recruited into studies on NIHR CRN Portfolio.
2. Increasing the proportion of NIHR CRN Portfolio studies that deliver in line with the study's planned delivery time and patient recruitment targets.
3. Increasing the number of life-sciences studies on NIHR CRN Portfolio
4. Reducing the time it takes for a study to set up and start participant recruitment.
5. Reducing the length of time it takes to recruit the first participant onto NIHR CRN Portfolio studies.
6. Increase the percentage of NHS Trusts and General Medical Practices that are involved in delivering NIHR CRN Portfolio studies.
7. Increase the number of participants recruiting into Dementias and Neurodegenerative (DeNDRoN) studies on the NIHR CRN Portfolio.

Section 3: CRN East Midlands Overview

The CRN East Midlands supports clinical research in NHS partner organisations across Derbyshire, Nottinghamshire, Lincolnshire, Leicestershire, Rutland and Northamptonshire.

CRN East Midlands is currently the 4th highest recruiting Clinical Research Network in England, with 41,699 participants recruited into 798 NIHR CRN Portfolio studies, as shown in figure 1. CRN: East Midlands has a High Level Objective (HLO) to recruit 46,000 participants to NIHR CRN Portfolio studies in 2017/18. Current recruitment is 90.7% of the year end recruitment goal.

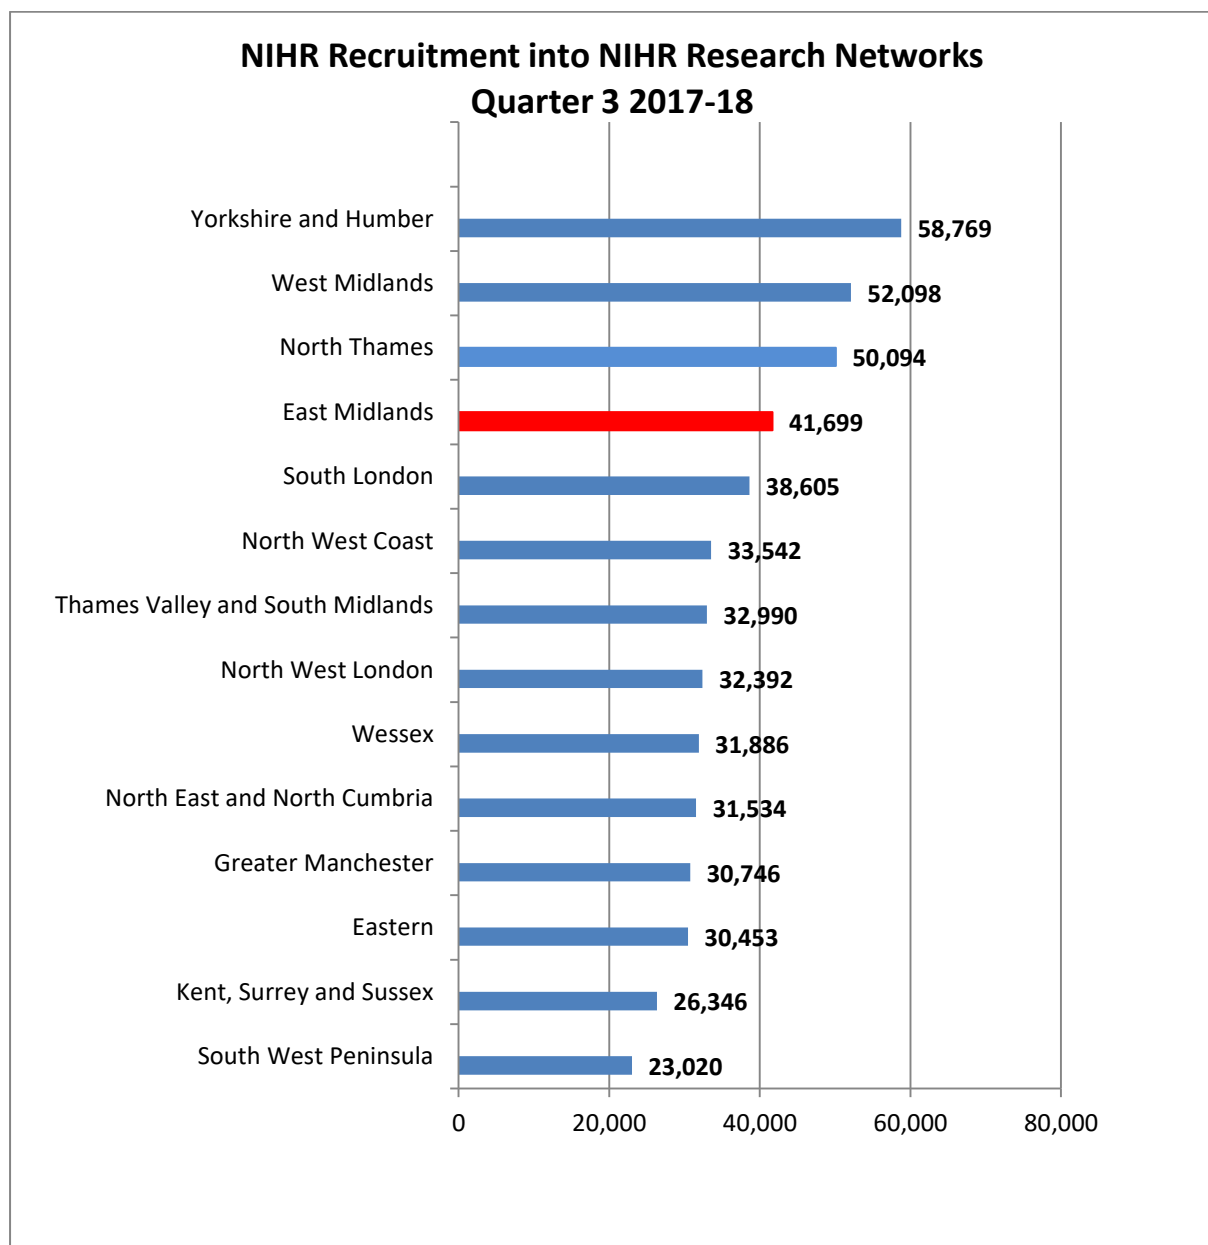

Figure 1

Figure 2 shows the percentage of recruitment activity within primary care organisations and NHS Trusts (Exclusive of recruitment at Independent Healthcare Service Provider sites)

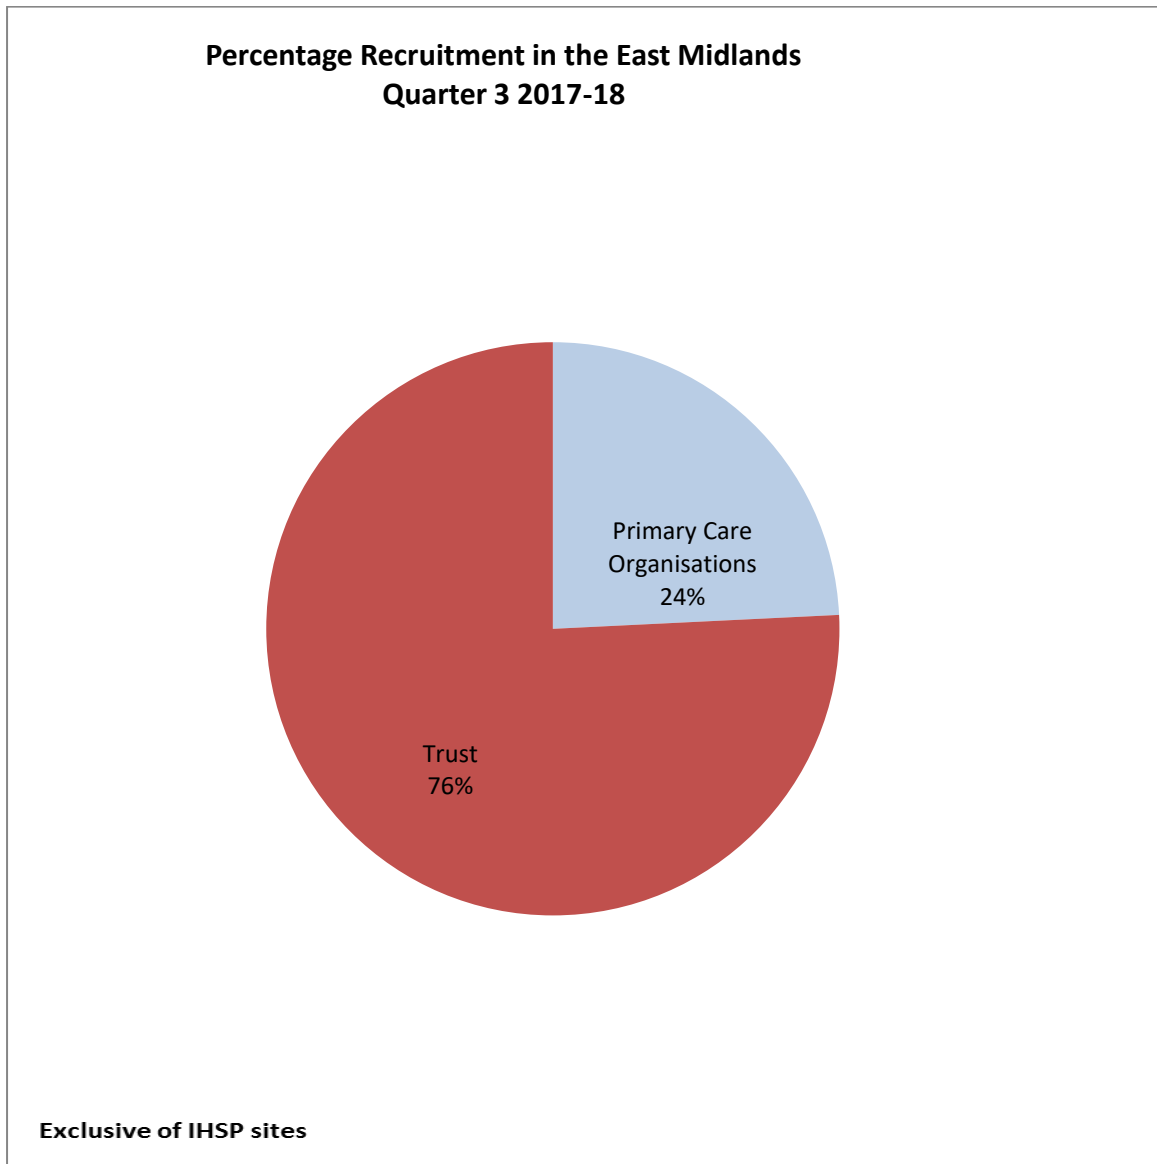

Figure 2

Please refer to the monthly CRN: East Midlands Summary report for more information on local network performance.

Section 4: Provider Trusts (Nottinghamshire)

The CRN East Midlands provides NIHR CRN Portfolio reports for local NHS trusts. These reports include details of open studies, participant recruitment, recruitment to time and target, involvement in commercial research and recruitment by clinical specialty area.

There are 16 NHS Trusts in the East Midlands, all in receipt of CRN funding to aid the delivery of NIHR Portfolio research. The total participant recruitment numbers for the three NHS Trusts within Nottinghamshire are shown in Figure 3.

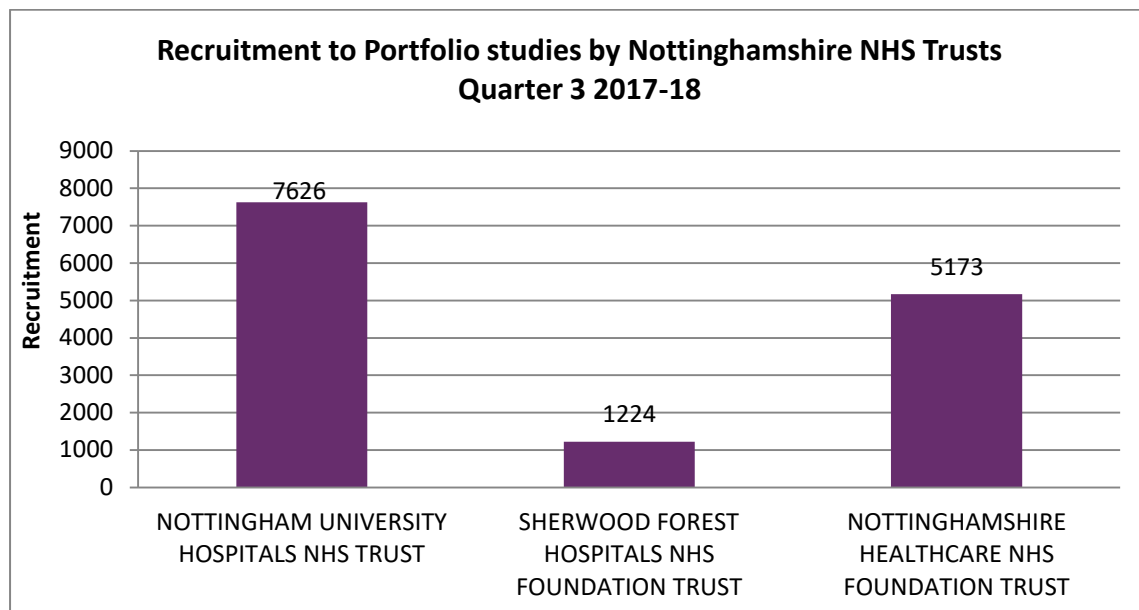

Figure 3

Figure 4 shows the total number of recruiting studies per NHS Trust.

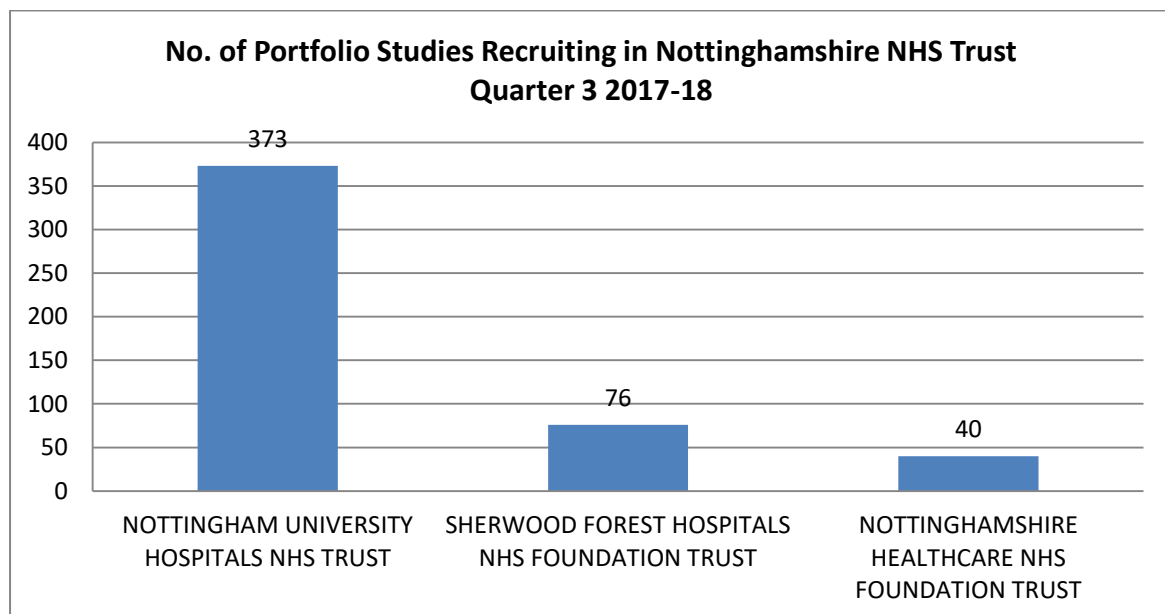

Figure 4

There are 30 research specialty areas in the NIHR CRN with NHS Trusts expected to contribute to a balanced portfolio of studies. Figure 5 shows recruitment by CRN specialty area for the Nottinghamshire NHS Trusts.

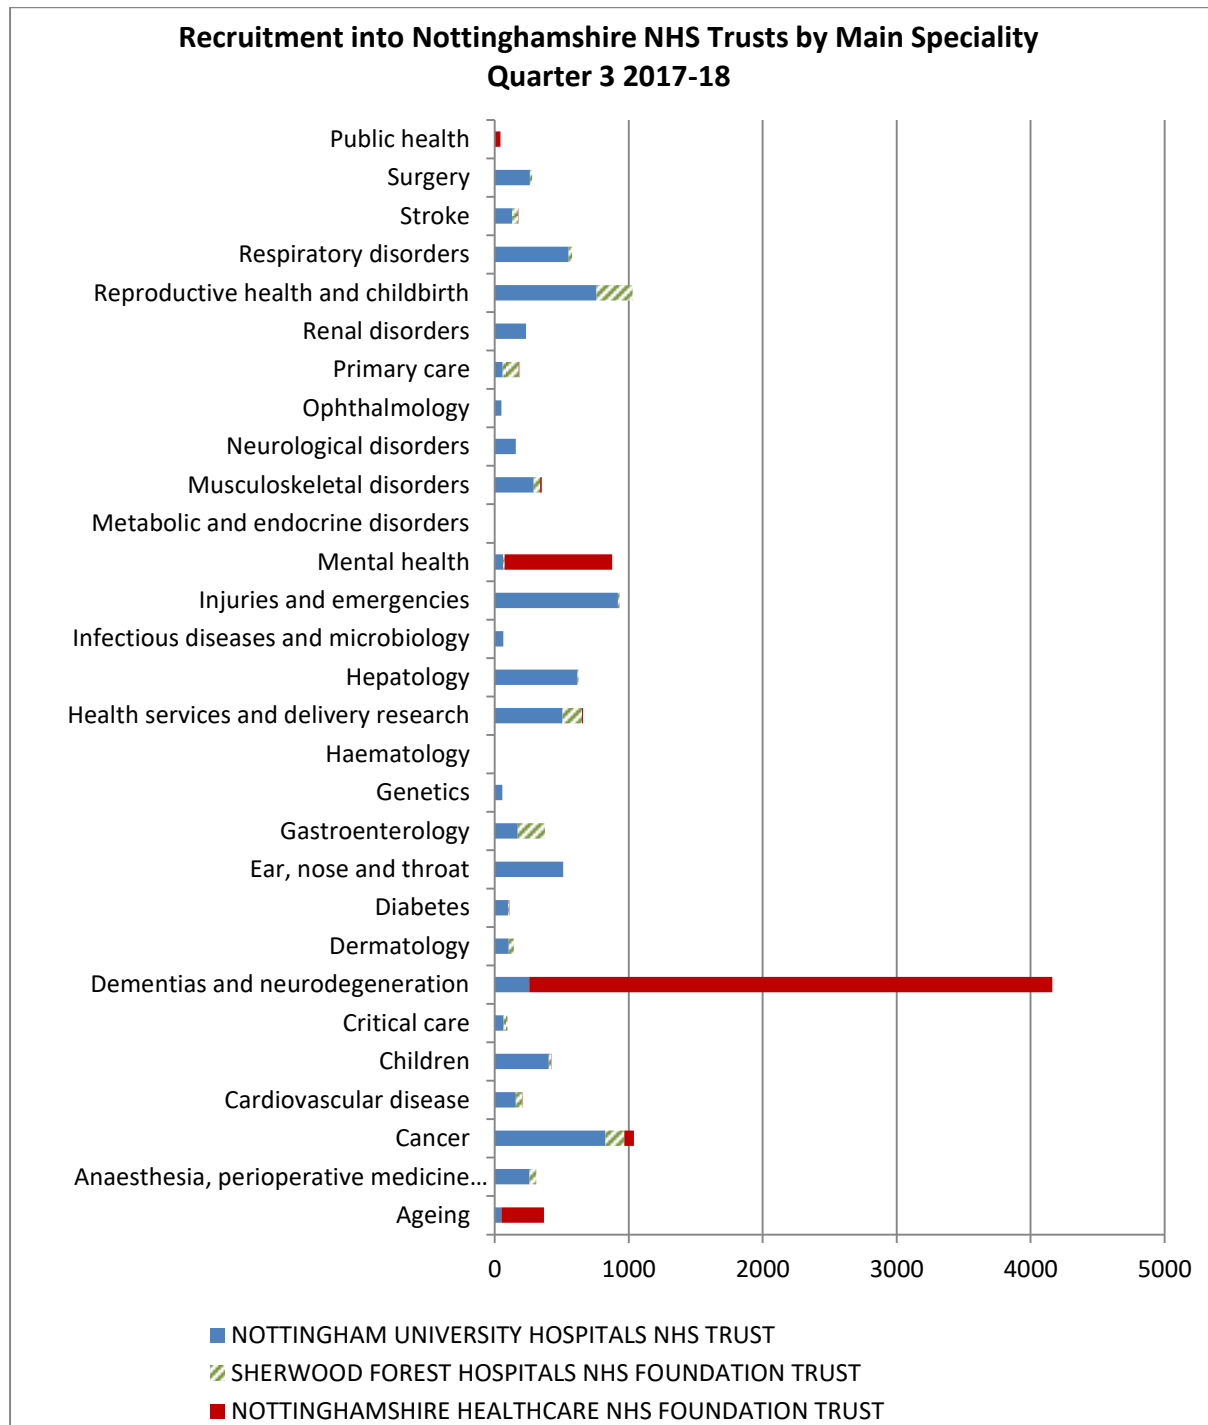

Figure 5

If you would like more information on provider Trust research activity, then please contact CRN East Midlands or the provider Trust R&D department for a copy of their report.

Section 5: Primary Care Organisations (East Midlands)

5.1 Primary Care High Level Objective (HLO)

The CRN: East Midlands has an HLO measuring the proportion of General Medical Practices recruiting each year into NIHR CRN Portfolio studies.

HLO	England Target	East Midlands Target	Progress	Comments
6C	40%	58%	41.2%	240 General Medical Practices recruiting into Portfolio studies (out of 582)

This does not include Care Homes and IHSP sites

5.2 Overview of East Midlands Primary Care Provider Recruitment

2017/18 Quarter 3 recruitment into CRN Portfolio studies across the East Midlands, is 7,021 participants where Primary Care is the managing speciality and an additional 2,418 participants from other managing specialties in the CCG group, totalling 9,439

Figure 6 shows the comparison breakdown of recruitment by CCGs at county level.

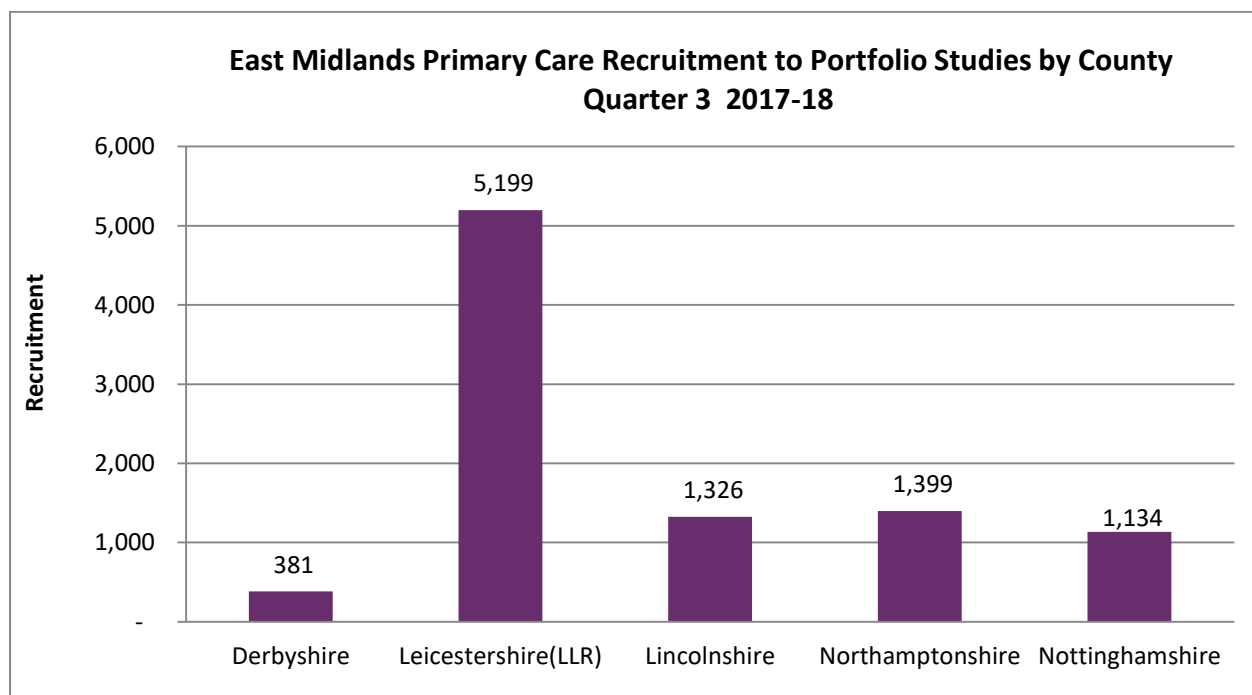

Figure 6

There are 273 Primary Care sites that have recruited patients throughout the East Midlands as shown in figure 7. There are 63 studies recruiting across 15 research speciality areas and the breakdown of this is shown in figure 8.

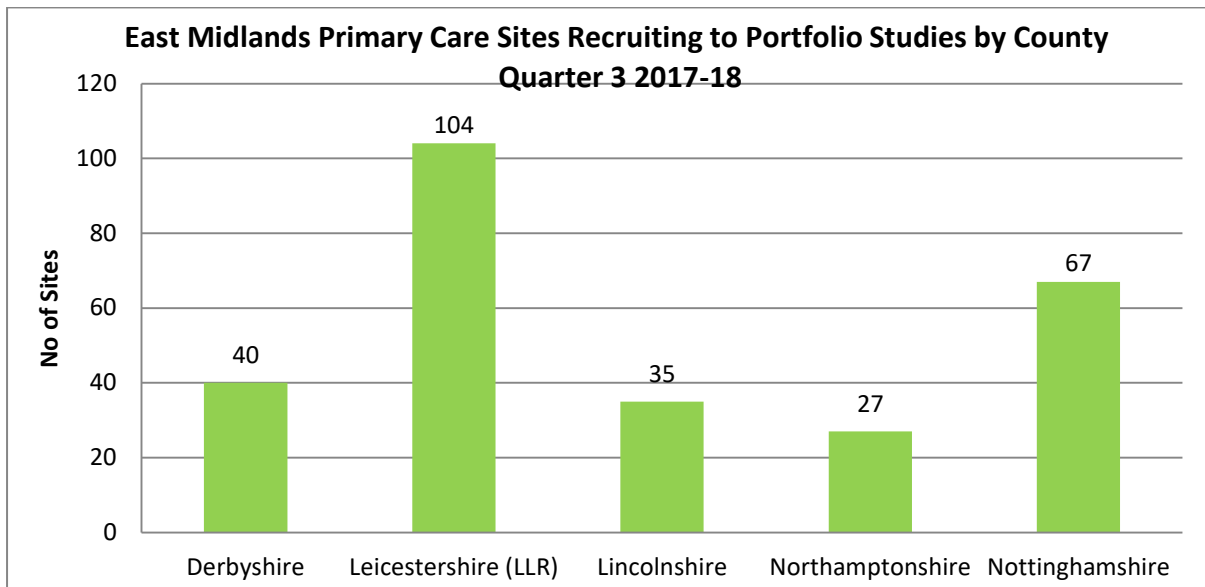

Figure 7

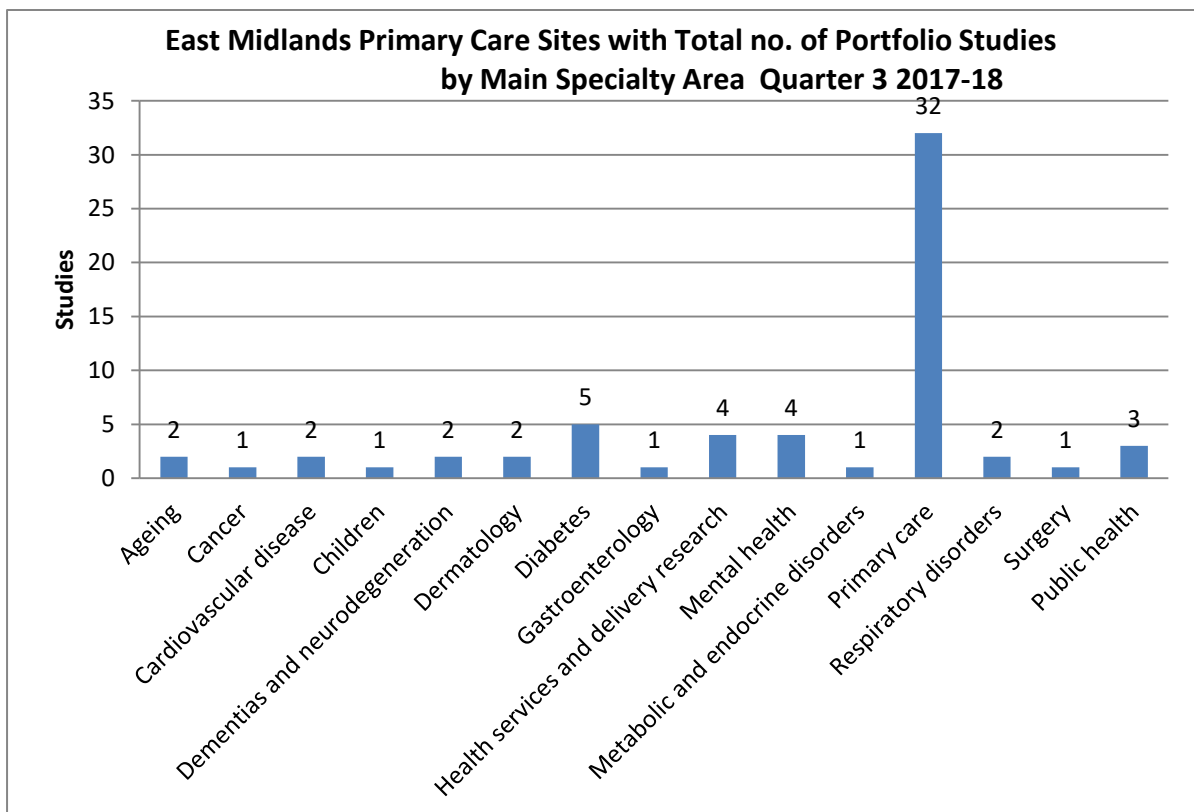

Figure 8

Figure 9 illustrates the total Primary Care sites by CCG that have recruited to NIHR CRN Portfolio studies in 2017/18.

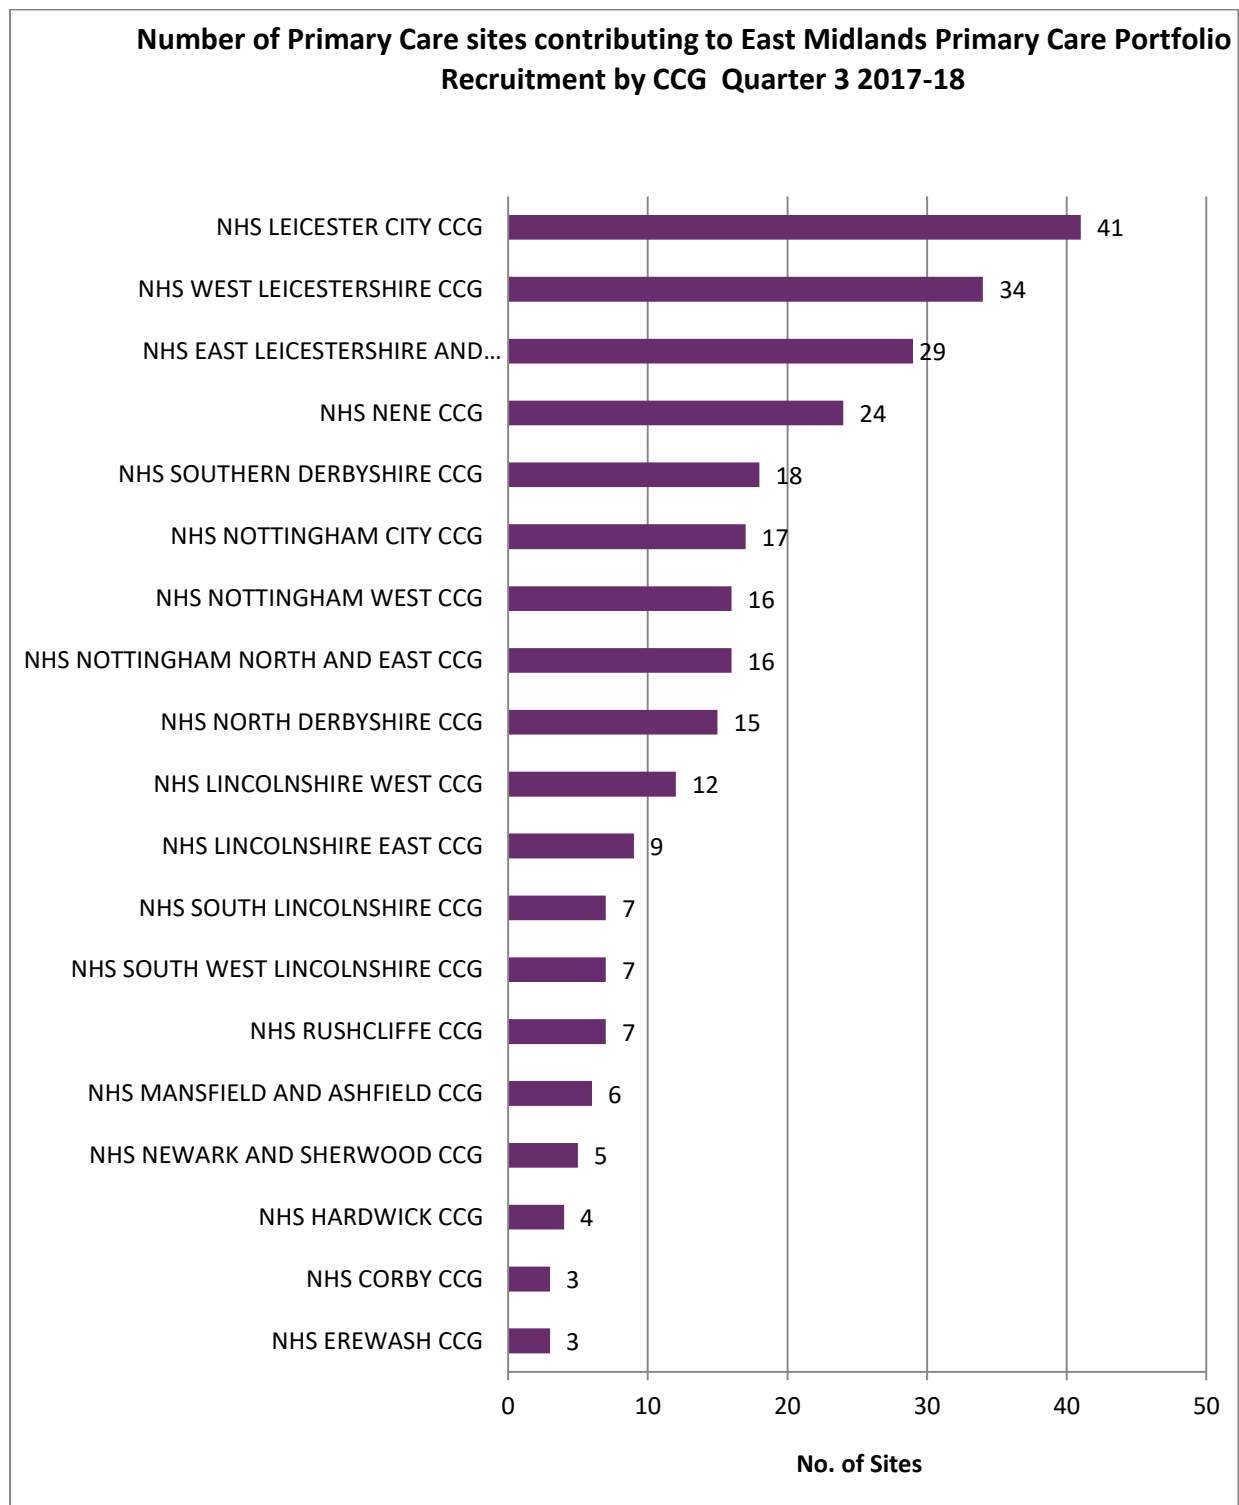

Figure 9

Section 6: Primary Care Organisations (Nottinghamshire)

6.1 Overview of Nottinghamshire CCGs

In Quarter 3 2017/18 (1 April 2017 to 29 January 2018), Primary Care sites in Nottinghamshire have recruited 1,134 participants into CRN Portfolio studies, with the highest number of participants recruited in Nottingham City CCG with 686

Figure 10 shows overall participant recruitment by Nottinghamshire CCGs for 2017/18

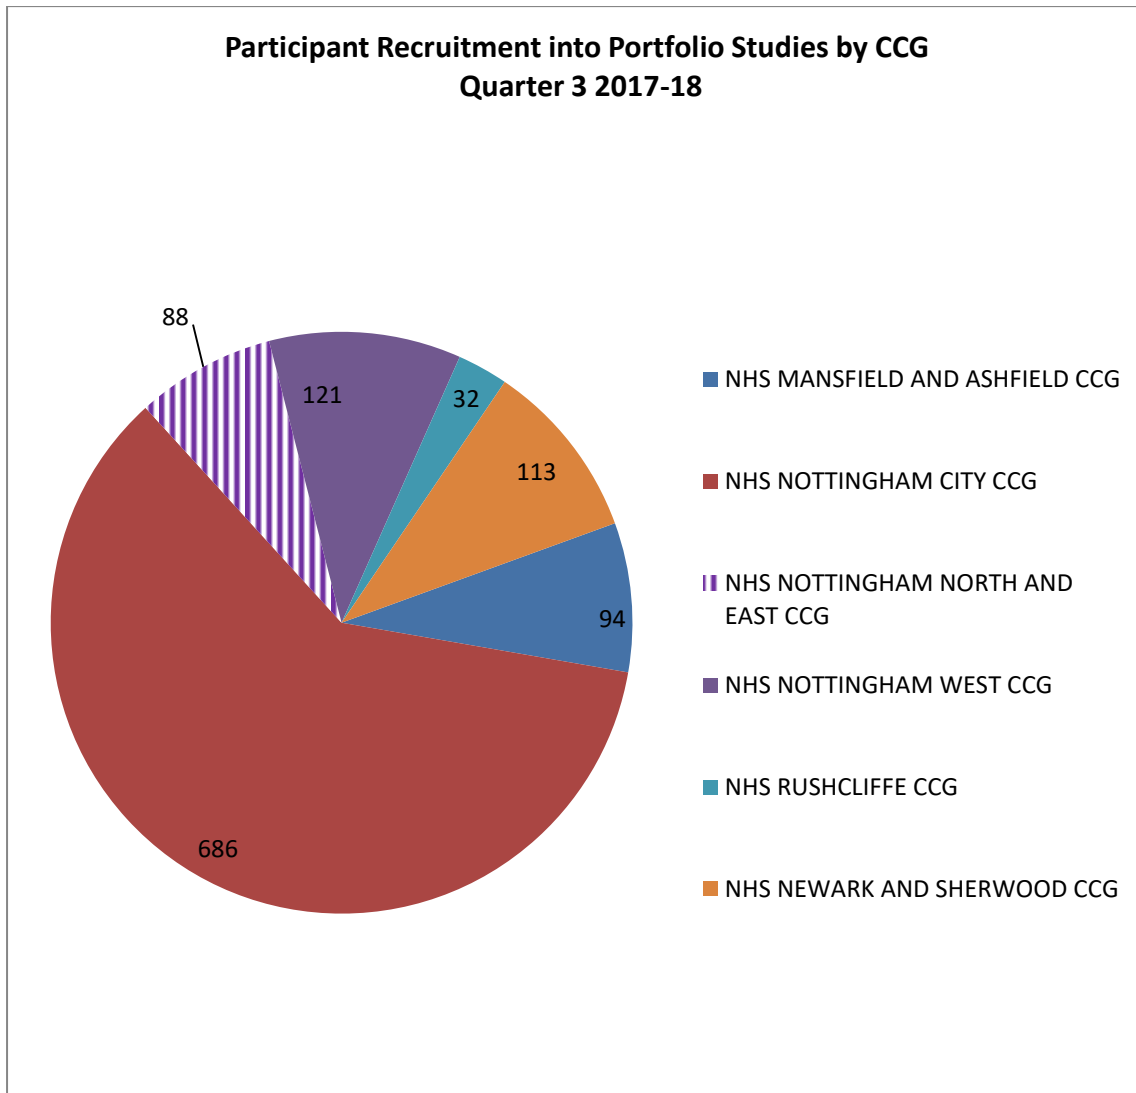

Figure 10

Figure 11 shows the number of recruiting studies per CCG for 2017/18
